Sequences that are not identical matches are annotated as similar.  SEQUENCING READ COVERAGE: Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.  OUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found at URL: http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.	sent onest remainder cloi of to of of to of of to of of to of to of to of of to of to of to of to of to of of to of of to of to of to of to of of to of of to of to of to of of of to of of of of to of of to of of of of of to of of o	MOTIEY,K.C. findPhrapLis Center clone name: CH230-177C11 Assembly program: Phrap; version 0.990329First call

Consensus quality: 114307 bases at least Q40 consensus quality: 121845 bases at least Q30 consensus quality: 128763 bases at least Q20 Estimated insert size: 114370; sum-of-contigs estimation Quality coverage: 0x in Q20 bases; agarose-fp estimation Quality coverage: 1.5x in Q20 bases; sum-of-contigs estimation

NOTE: Estimated insert size may differ from sequence length

(see http://www.hgsc.bcm.tmc.edu/docs/Genbank\_draft\_data.html).
NOTE: This is a 'working draft' sequence. It currently consists of 64 contigs. The true order of the pieces

\* arbitrary. Gaps between the contigs are represented as \* runs of N, but the exact sizes of the gaps are unknown \* This record will be updated with the finished sequence is not known and their order in this sequence record is

as soon as it is available and the accession number will

be

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Center: Baylor College of Medicine

    Genome Center

                                                                                                                                                                                                                                                                                                                          Summary Statistics
```

```
NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

NOTE: This is a 'working draft' sequence. It currently consists of 64 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            as

                                                                                                                                                                                                                                                                                                                                                                                    SUBCELLULAR LOCATION: SARCOPLASMIC RETICULUM AND NUCLEAR MEMBRANE IN HEART MUSCLE. PARTICIPATION OF MULTIPLE TARGETING SIGNALS ALLOW CORRECT INTRACELLULAR TARGETING. THESE MAY BE REPEATED MOTIFS RICH IN BASIC AND HYDROPHOBIC AMINO ACIDS, PALMITOYLATED/MYRISTOYLATED MOTIFS OR ALTERNATIVELY SPLICE TARGETING SEQUENCES.

TISSUE SPECIFICITY: HIGHLY EXPRESSED IN CARDIAC AND SKELETAL MUSCLE, FOLLOWED BY BRAIN.

MUSCLE, FOLLOWED BY BRAIN.

DOMAIN: RII-ALPHA BINDING SITE, PREDICTED TO FORM AN AMPHIPATHIC HELIX, COULD PARTICIPATE IN PROTEIN-PROTEIN INTERACTIONS WITH A COMPLEMENTARY SURFACE ON THE R-SUBUNIT DIMER.

SIMILARITY: CONTAINS 2 SPECTRIN REPEATS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Biol. Chem. 270:9327-9333(1995).
FUNCTION: BINDS TO TYPE II REGULATORY SUBUNITS OF PROTEIN KINASE AND ANCHORS/TARGETS THEM TO THE NUCLEAR MEMBRANE OR SARCOPIASMIC RETICULUM. MAY ACT AS AN ADAPTER FOR ASSEMBLING MULTIPROTEIN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    SUBUNIT: INTERACTS WITH RII SUBUNIT OF PKA, PHOSPHATASE 2B
